the term financial management refers to the process through which an organization's finances are planned, organised, directed and controlled. Financial management is defined as the activity connected with planning, raising, regulating and administering finances utilised by the firm. By Guthman and Dougal, finances play a vital role; hence this area of study focuses on how to acquire and effectively spend money. The term financial management refers to the administration of the financial system, planning, organising, managing and controlling a business's financial operations. All fall within the purview of financial management. Financial management affects every facet of for-profit and non-profit organisations alike. It's responsible for a wide variety of tasks such as raising capital, allocating resources and monitoring results in the financial realm. As a result, it has become an essential part of every business. Economics is the study of fundamental financial theory and its application to the conduct of economic or monetary operations. As a result, it is clear that economic ideas are applicable to financial matters. As a result of the development of financial management as a distinct field of study, finance now serves as a crucial component in every sector of the economy. Money and other liquid assets such as shares of stock, debentures and government bonds are examples of financial inputs.

Management processes like financial management are focused with the allocation and monitoring of capital. It was in the 20th century that the field of finance management emerged as its own academic discipline. Its previous use was in the field of economics. Its fundamental breadth as a field of study has evolved throughout the years. When it first emerged, financial management's primary focus was on securing capital for companies. However, from a contemporary perspective, it is not only the gathering of money but also their effective use that constitute the fundamental tasks of the financial management. In the modern day, a company's financial issues are analyzed by the financial management department. The term financial management is used to describe the process of overseeing a company's finances, funding, managing working capital, budgeting for capital expenditures and planning the organizational capital structure. All are part of the finance department's responsibilities. As part of this process, the company's monetary assets must be managed and controlled. Further, it provides the basis for future decisions on growth, diversification, partnership and consolidation plans. Management of the finance department is what we mean when we talk about financial management. Finance is the study and practise of directing, organizing and managing a business's money operations.
